## FOREWORD

This issue of the INIS Thesaurus includes all updates up to the end of September 2019. It contains a total of 31 344 descriptors, of which 22 473 are valid descriptors and 8871 are forbidden terms.

The INIS Thesaurus contains the controlled terminology for indexing all information within the wider subject scopes of the International Nuclear Information System (INIS). The International Nuclear Information System (INIS) hosts one of the world's largest collections of published information on the peaceful uses of nuclear science and technology. It offers online access to a unique collection of non-conventional literature. INIS is operated by the IAEA in collaboration with over 150 members. The terminology is intended for use in subject descriptions for input or retrieval of information in INIS, as well as in other suitable systems.

The terminology in this thesaurus has its origin in the 1969 edition of the EURATOM Thesaurus. The structure subsequently given to that terminology was the result of a systematic study performed by subject specialists at the INIS Secretariat and several Member States. Further expansion of the Thesaurus terminology was done in cooperation with the Energy Technology Data Exchange (ETDE), to incorporate wider vocabulary on all forms of energy.

ETDE was a multilateral information exchange agreement which existed from 1987 to June 2014 under the auspices of the International Energy Agency (IEA). ETDE's mandate was to exchange a wide scope of energy science and technology information among its partners, building its primary database, the ETDE World Energy Base (ETDEWEB).

The INIS Thesaurus is the result of continued editing performed as an international collaborative effort by a team of experts, with the support and cooperation of the Office of Scientific and Technical Information, U.S. Department of Energy.

Any suggestions for improvements to the present document are welcome. Comments should be sent to INIS at the following address:

## PREFACE

“A thesaurus is a terminological control device used in translating from the natural language of documents, indexers or users into a more constrained ‘system language’ (document language, information language)”. It is also “a controlled and dynamic vocabulary of semantically and generically related terms which covers a specific domain of knowledge”. The INIS Thesaurus fits this definition adopted by UNESCO.<sup>1</sup>

The domain of knowledge covered by the INIS Thesaurus includes physics (in particular, plasma physics, atomic and molecular physics, and especially nuclear and high-energy physics), chemistry, materials science, earth sciences, radiation biology, radioisotope effects and kinetics, applied life sciences, radiology and nuclear medicine, isotope and radiation source technology, radiation protection, radiation applications, engineering, instrumentation, fossil fuels, synthetic fuels, renewable energy sources, advanced energy systems, fission and fusion reactor technology, safeguards and inspection, waste management, environmental aspects of the production and consumption of energy from nuclear and non-nuclear sources, energy efficiency and energy conservation, economics and sociology of energy production and use, energy policy, and nuclear law.

The terms in the INIS Thesaurus are listed alphabetically. For each alphabetical entry, a “word block”, containing the terms associated with this particular entry, is displayed. In the word block, terms that have a hierarchical relationship to the entry are identified by the symbols **BT** for *Broader Term*, and **NT** for *Narrower Term*; terms with an affinitive relationship are identified by **RT**, for *Related Term*; terms with a preferential relationship are identified by **USE** or **SEE**, and **UF** for *Used For*, and **SF** for *Seen For*. In case of multiple **USE** relationships for a forbidden term, **all** listed descriptors should be used to index or search a given concept. In case of multiple **SEE** relationships, **one or more** of the listed descriptors should be considered for indexing or searching this concept.

A non-descriptor may refer to a descriptor that has *Narrower Terms*. Users of the INIS Thesaurus should always refer to the word block of that descriptor, to ensure that the most specific term is chosen. For all terms, only one level of *Broader Terms* is shown. If terms have additional levels of broader terms, e.g. **BT2**, **BT3**, etc., this is indicated by an asterisk, e.g. **\*BT1**. Up to ten levels of *Narrower Terms* are shown for all terms. If terms have additional levels of narrower terms, such as **NT11**, **NT12**, etc., this is indicated by an asterisk, e.g. **\*NT10**.

The dates printed after each descriptor indicate when the term was introduced for use in the INIS database or in ETDEWEB. If only one date is given, the descriptor was introduced in both databases at the same time. If the descriptor is **not** followed by a date, it already existed in the Thesaurus **before 30 June 1975**.

<sup>1</sup> SC/WS/555: Guidelines for the Establishment and Development of Monolingual Thesauri: United Nations Educational, Scientific and Cultural Organization, Paris, September 1973.

When searching for entries in the alphabetic listing, users should take note of the following Unicode collation algorithm (sort order):

	space
!	exclamation mark
"	quotation mark
#	number sign
\$	dollar sign
%	percent sign
&	ampersand
'	apostrophe
(	left parenthesis
)	right parenthesis
*	asterisk
+	plus sign
,	comma
-	hyphen-minus
.	period
/	solidus
	Arabic numerals 0-9
	Roman alphabet A-Z

Numbers, which include single and multiple digits, are sorted by the initial digit first, e.g. the isotopes BORON 10 and BORON 19 appear before BORON 7 and BORON 9. In the same way, RUTHENIUM 100 appears before RUTHENIUM 88.

All terms, in which the first character is a number, appear before the letter A.

Additions and changes to the vocabulary of controlled terminology in the current Thesaurus are summarized in monthly updates. They are available from the INIS website ([www.iaea.org/inis](http://www.iaea.org/inis)). These updates include the first-level broader and narrower terms, related terms, scope notes for the new descriptors, and the descriptor(s) to be used for each new forbidden term.

**ACOUSTIC MEASUREMENTS**

1995-07-03

Measurements of properties, quantities, or conditions by means of acoustical, i.e. mechanical waves.

- UF sonic measurements
- NT1 acoustic detection
- RT acoustic insulation
- RT acoustic monitoring
- RT acoustic testing
- RT noise dosimeters
- RT seismic surveys
- RT seismographs
- RT sonic logging
- RT sonic probes
- RT sound waves
- RT ultrasonic testing

**ACOUSTIC MICROSCOPY**

INIS: 1993-04-07; ETDE: 1984-07-10

- UF scanning acoustic microscopy
- BT1 microscopy
- RT acoustic testing
- RT mechanical properties

**ACOUSTIC MONITORING**

1995-07-03

- UF microseismic monitoring
- BT1 monitoring
- RT acoustic detection
- RT acoustic insulation
- RT acoustic measurements
- RT in core instruments
- RT reactor instrumentation
- RT reactor monitoring systems
- RT sonic logging
- RT sound waves

- USE acoustic nmr

**ACOUSTIC RADAR**

INIS: 1993-05-06; ETDE: 1980-03-29

Use of sound waves with RADAR techniques for remote probing of the lower atmosphere.

- \*BT1 radar
- RT meteorology
- RT remote sensing
- RT sound waves

**acoustic spark chambers**

- USE sonic spark chambers

**ACOUSTIC TESTING**

- \*BT1 nondestructive testing
- NT1 acoustic emission testing
- NT1 ultrasonic testing
- RT acoustic measurements
- RT acoustic microscopy

**ACOUSTICS**

INIS: 1999-01-20; ETDE: 1976-01-23

- NT1 magnetoacoustics
- RT acoustic insulation
- RT photoacoustic effect
- RT sound waves
- RT speech synthesizers

**ACPR REACTOR**

Sandia National Laboratories, Albuquerque, New Mexico, USA. Shut down in 1977.

- UF acrr reactor

**ai aqueous carbonate process**

INIS: 2000-04-12; ETDE: 1977-05-07

Process utilizing aqueous sodium carbonate solution to sorb sulfur dioxide from power plant flue gas. Unique design features use of a spray dryer as an sulfur dioxide scrubber producing a product suitable for regeneration and complete reduction of the sodium salts in a molten pool.

(Prior to March 1994, this was a valid ETDE descriptor.)

**BEACON PROCESS**

INIS: 2000-04-12; ETDE: 1981-04-17

The beacon process converts low to medium btu gas to a methane-rich high btu gas by two main reactions. In the presence of a catalyst, carbon is deposited by shifting carbon monoxide to carbon dioxide. The deposited carbon and catalyst are active for hydrogenation to methane.

**BINARY-FLUID SYSTEMS**

INIS: 2000-04-12; ETDE: 1976-03-31  
 A system in which hot fluid is passed through  
 a heat exchanger to transfer heat to a low-  
 boiling point fluid (such as freon or  
 isobutane), which is then used as the working  
 fluid in a vapor-turbine cycle.

**bom-erda process**

INIS: 2000-04-12; ETDE: 1978-04-27

This wet oxidative process employs air in place of oxygen and operates at higher temperature and pressure than the Ledgemont process. Ferric and ferrous sulfates and sulfuric acid are generated.

(Prior to March 1994, this was a valid ETDE descriptor.)

**CEA-ADL DUAL ALKALI PROCESS**

INIS: 2000-04-12; ETDE: 1978-06-14  
Flue gas is passed through an absorption  
section where sulfur dioxide, chlorides, and  
sulfur trioxide are removed via contact with a  
solution of sodium salts. The sodium/sulfur  
salts are reacted with hydrated lime in a  
special 2-stage reactor to regenerate the  
sodium. Calcium/sulfur solids produced are  
separated from the liquor containing  
regenerated sodium compounds and disposed  
of. The regenerated liquor is recirculated to  
the absorption section.

**CHROMIUM-MOLYBDENUM STEELS**

1994-09-30

*Steels containing Cr and Mo as main alloying elements; Cr content is higher than Mo content.*

(Until November 1983 this was a valid descriptor. From November 1983 until September 1994 the concept was indexed to CHROMIUM ALLOYS, MOLYBDENUM ALLOYS and the most specific appropriate term from the STEELS hierarchy.)

**EXCIMER LASERS**

INIS: 1997-06-17; ETDE: 1984-05-08

Lasers whose lasing medium is a dimer that exists in the excited state and dissociates in the ground state.

- \*BT1 gas lasers
- NT1 krypton chloride lasers
- NT1 krypton fluoride lasers

**EXCISION REPAIR**

1995-01-10

- \*BT1 dna repair

**EXCITATION**

Addition of energy to a nuclear, atomic or molecular system transferring it to another energy state.

- UF core polarization (nuclei)
- BT1 energy-level transitions
- NT1 collective excitations
- NT1 coulomb excitation
- NT1 inner-shell excitation
- RT activation energy
- RT chemical activation
- RT de-excitation
- RT electron beam pumping
- RT excited states

**EXXON GASIFICATION PROCESS**

INIS: 2000-04-12; ETDE: 1976-09-14

*Coal is reacted with steam in a fluidized-bed gasifier at 1500-1700 degrees F. To provide the necessary heat, a stream of circulating char is withdrawn from the gasifier and partially burned with air in a char heater to raise its temperature. The heated char is returned to the gasifier after separation from the flue gas. The product gas is a medium-btu gas suitable for methanation to sng.*

RT sng processes

**EXXON LIQUEFACTION PROCESS**

INIS: 2000-04-12; ETDE: 1976-09-14

*Crushed coal is slurried with a recycle solvent, preheated to about 800 degrees F, and then pumped into the liquefaction reactor operating at about 2,000 P.S.I. Preheated hydrogen is also added to the reactor. The product from the liquefaction reactor is sent to the separation step where gas, naphtha, recycle solvent, distillate, and heavy bottoms are separated by distillation.*

**fuel economy**

INIS: 1992-08-17; ETDE: 1976-04-19  
(Prior to December 1991 this was a valid ETDE descriptor.)

- USE fuel consumption

**FUEL ELEMENT CLUSTERS**

- UF *bundles (fuel elements)*
- UF *clusters (fuel elements)*
- UF *fuel bundles*
- UF *rod bundles*
- BT1 fuel assemblies
- RT spacers

**FUEL ELEMENT FAILURE**

1997-04-29

- BT1 failures
- RT failed element detection
- RT failed element monitors
- RT fuel motion detection
- RT radiation hazards

- RT reactor accidents
- RT reactor operation
- RT reactor safety

**FUEL ELEMENTS**

(From January 1975 to February 1997 FUEL SPHERES was a valid ETDE descriptor.)

- UF *fuel spheres*
- UF *nuclear fuel elements*
- UF *reactor fuel elements*
- UF *spheres (fuel)*
- BT1 reactor components
- NT1 annular fuel elements
- NT1 fuel pins
- NT1 fuel plates
- NT1 fuel rods
- NT2 hollow fuel rods
- NT1 fuel wires
- NT1 spent fuel elements
- NT1 thermionic fuel elements
- RT burnout

**FUEL FABRICATION PLANTS**

1996-07-18

(Prior to March 1997 GENERAL ATOMIC FUEL FABRICATION FACILITY was a valid ETDE descriptor.)

- UF *general atomic fuel fabrication facility*
- BT1 nuclear facilities
- NT1 cimarron plutonium production plant
- NT1 cimarron uranium fuel plant
- NT1 exxon fuel fabrication facility
- NT1 mixed oxide fuel fabrication plants
- NT1 westinghouse recycle fuels plant
- RT fabrication
- RT fuel cycle centers
- RT fuel elements
- RT industrial plants
- RT nuclear industry
- RT nuclear parks

**FUEL FEEDING SYSTEMS**

INIS: 1983-03-15; ETDE: 1976-07-07

- UF *coaltek process*
- BT1 fuel systems
- NT1 stokers
- RT fossil fuels
- RT fuel gas
- RT materials handling
- RT pellet injection
- RT pulverizers
- RT thermonuclear fuels
- RT thermonuclear reactor fueling

**FUEL GAGES**
