

ADEPT

Innovative Tool to Reduce Worker Exposure

Outline

- **S**ource **T**erm **M**onitoring (**STM**) Program at CANDU Plants
- Outage Radiation Fields & Simulations
- **A**dvanced **D**ose **E**xposure **P**lanning **T**ool (ADEPT)
- Application of ADEPT

Kinectrics Company: History of Growth

Background: CANDU Reactor Unit

CANDU Reactor Unit:

- 480 Fuel Channels, On-Power Refueling;
- Inspection & Maintenance Outages every 2-3 years;
- Radionuclides deposit into the magnetite layer of out-of-core surfaces in the Primary Heat Transport System (PHTS) forming the Outage Radiation Fields;
- Magnetite deposits acting as a “full-flow” purification system;
- PHTS surface area:
 - Steam Generators ~ 17,000 m²
 - Feeders and Headers ~ 4,000 m² (main radiation source in the vault)
- Optimization of Radiation Protection requires detailed characterization and prediction of the outage radiation fields.

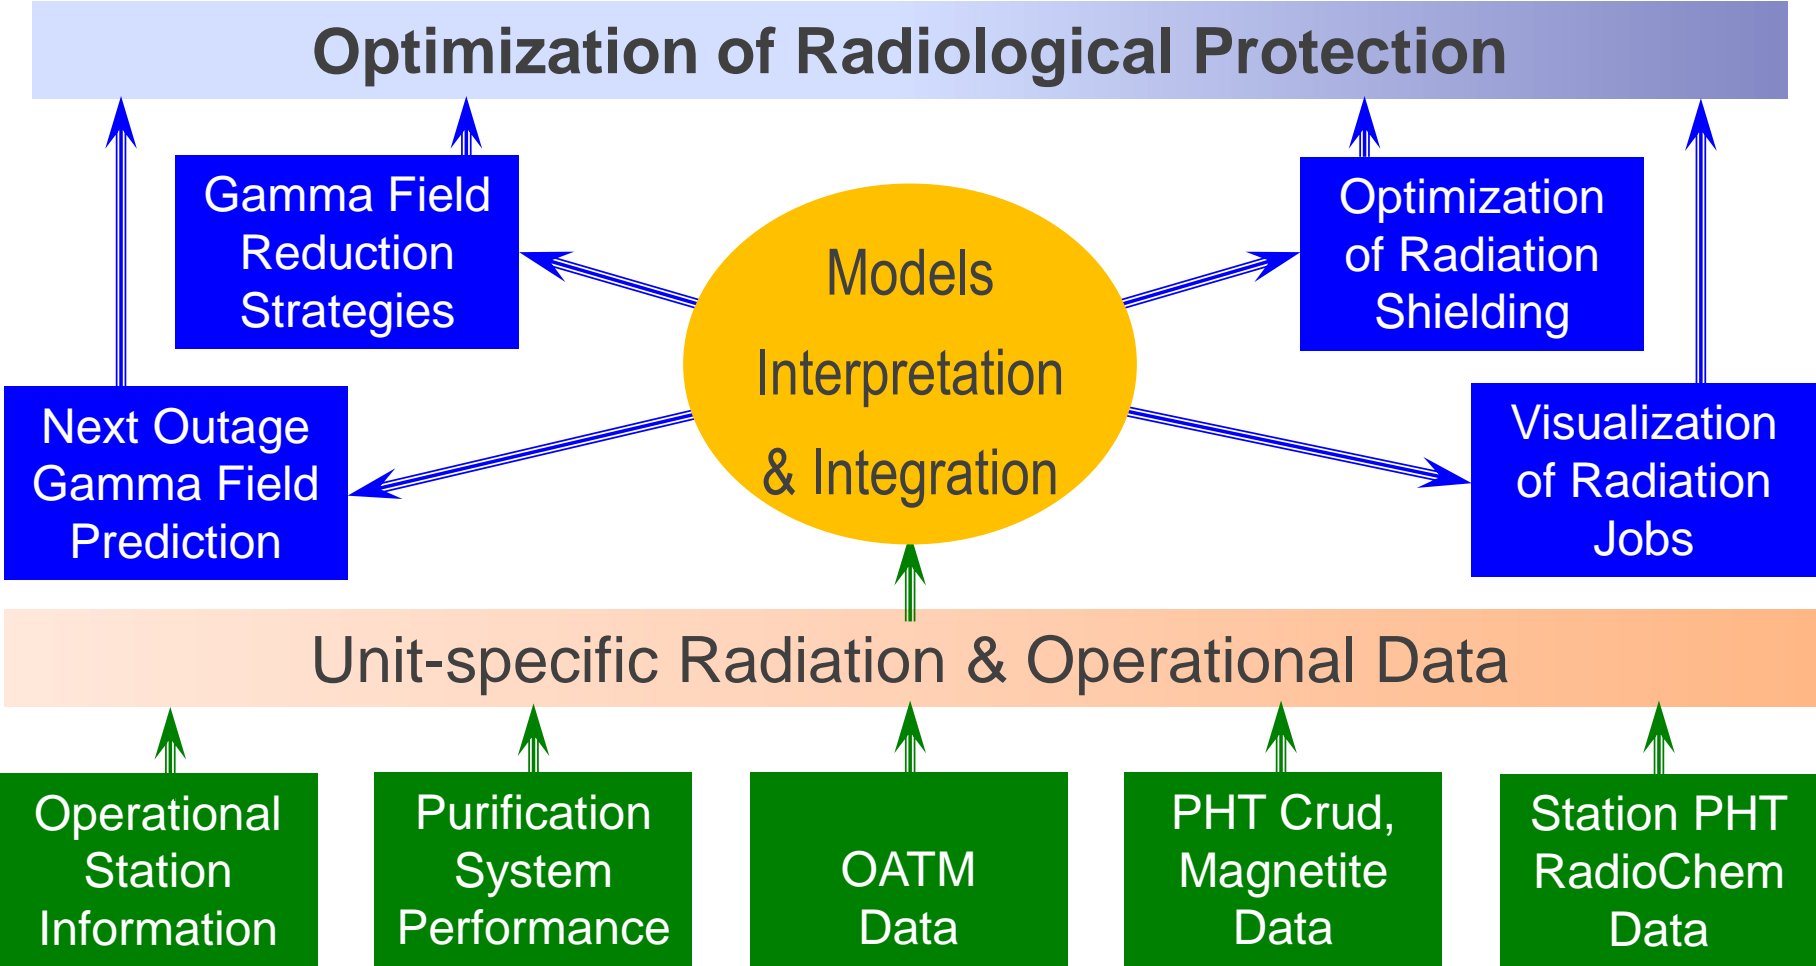

Source Term Monitoring Program

Kinectrics routinely conducts STM for the CANDU fleet (21 Units).

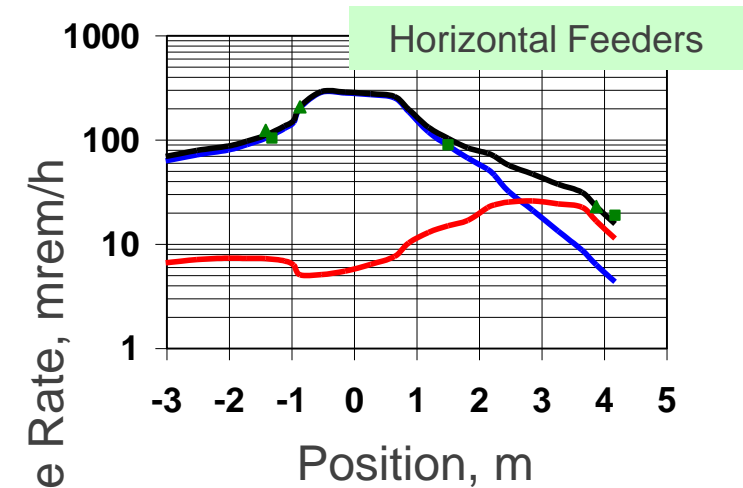

Main activities include:

- **O**utage **A**ctivity **T**ransport **M**onitoring Surveys (OATM)
- Survey data integration and interpretation
- Radiation field trend analysis & predictions
- Impact analysis of unit service/operational conditions and system performance on the outage radiation fields
- Comprehensive characterization of Crud / Deposits / Reactor Artefacts

STM Methodology

Reactor Vault Model & Radiation Fields

RF Dose Rate Map & Radionuclide Distributions

Advanced Dose Exposure Planning Tool

- Planning and Evaluation of Radiation Protection
- Procedural Training for New and Existing Staff
- Planning of Inspection and Maintenance Activities
- Pre-job Briefings and Post-job Reviews
- Benchmarking
- Support for ALARA Initiatives

Radiation Job Simulations

- [Fueling Machine Platform \(Video\)](#)
- [Reactor Vault \(Video\)](#)

Simulations vs Station Data

ADEPT - Interface

- OKULUS Virtual Reality
- Leap Motion Hand Tracking Technology

ADEPT – Key Features

- Fully customizable real-time 3D virtual reality job simulation in a CANDU reactor environment based on the OATM data
- Live display of whole body and extremity dose rates, as well as doses of simulated workers
- Recording of radioactive job procedures for future analysis
- Instant estimate of shielding option effects
- Multiple dosimeters take the accuracy of effective worker dose estimations to a new level

ADEPT - Benefits

- Visualizes work environments for staff in great detail
- Provides options for elaborate planning to help reduce workers dose & save time on the Critical Path
- Enables an opportunity to evaluate the impact of working in different configurations and scenarios
- Demonstrates the effects of Source Term Reduction
