

Giacomo Grasso

Dr. Grasso professional experience includes the coordination of activities and R&D programmes on the analysis and design of the core for advanced reactor systems, and on fuel cycle studies. Dr. Grasso is the chief designer of the ALFRED core system and has contributed to developing the design of the core in several international Led Fast Reactors (LFR) projects. He has contributed to the writing of the Generation IV International Forum (GIF)'s LFR white papers on reactor safety and on Proliferation Resistance and Physical Protection, as well as to the review of the GIF's LFR Safety Design Criteria.
