

International Symposium on Managing Land and Water for Climate-Smart Agriculture 25 July to 29 July 2022

OPPORTUNITIES FOR EXHIBITORS

The Food and Agriculture Organization of the United Nations (FAO) and the International Atomic Energy Agency (IAEA) are organizing an FAO/IAEA International Symposium on Managing Land and Water for Climate-Smart Agriculture at the IAEA Headquarters in Vienna, Austria from 25 to 29 July 2022 with the possibility of remote connection.

Approximately 350 participants from FAO and IAEA Member States and international organizations are expected to attend the symposium. In conjunction with the symposium, there are opportunities for commercial vendors to exhibit/display their products and a limited amount of space will be available for that purpose.

Each company will have, free of charge, an exhibition space of 6m² (3x2m) including one table (80x160cm) and 2 chairs. Alternatively, professional booths with walls can be rented from an outside company.

Voluntary contribution towards the symposium is welcomed and would be acknowledged on the IAEA Conference and Meetings App. The App will contain all symposium related information and will also serve as virtual platform for the event.

Interested parties should contact the Scientific Secretariat by e-mail SWMCN-Symposium2022@iaea.org before **30 April 2022**.

Further details on logistical arrangements for the exhibition will be sent to the exhibitors after their pledge to exhibit has been received.

Should the event be turned into a fully virtual event, exhibitors will still have the opportunity to promote their products by providing a link to their website or virtual exhibition platform which will be made available on the IAEA Conference and Meetings App.
