

These seeds
will be in
space for
5 months

Half of the
seeds will
be placed
outside (FIVE
WEEKS)

While the other
half stays

inside ISS

inside...z

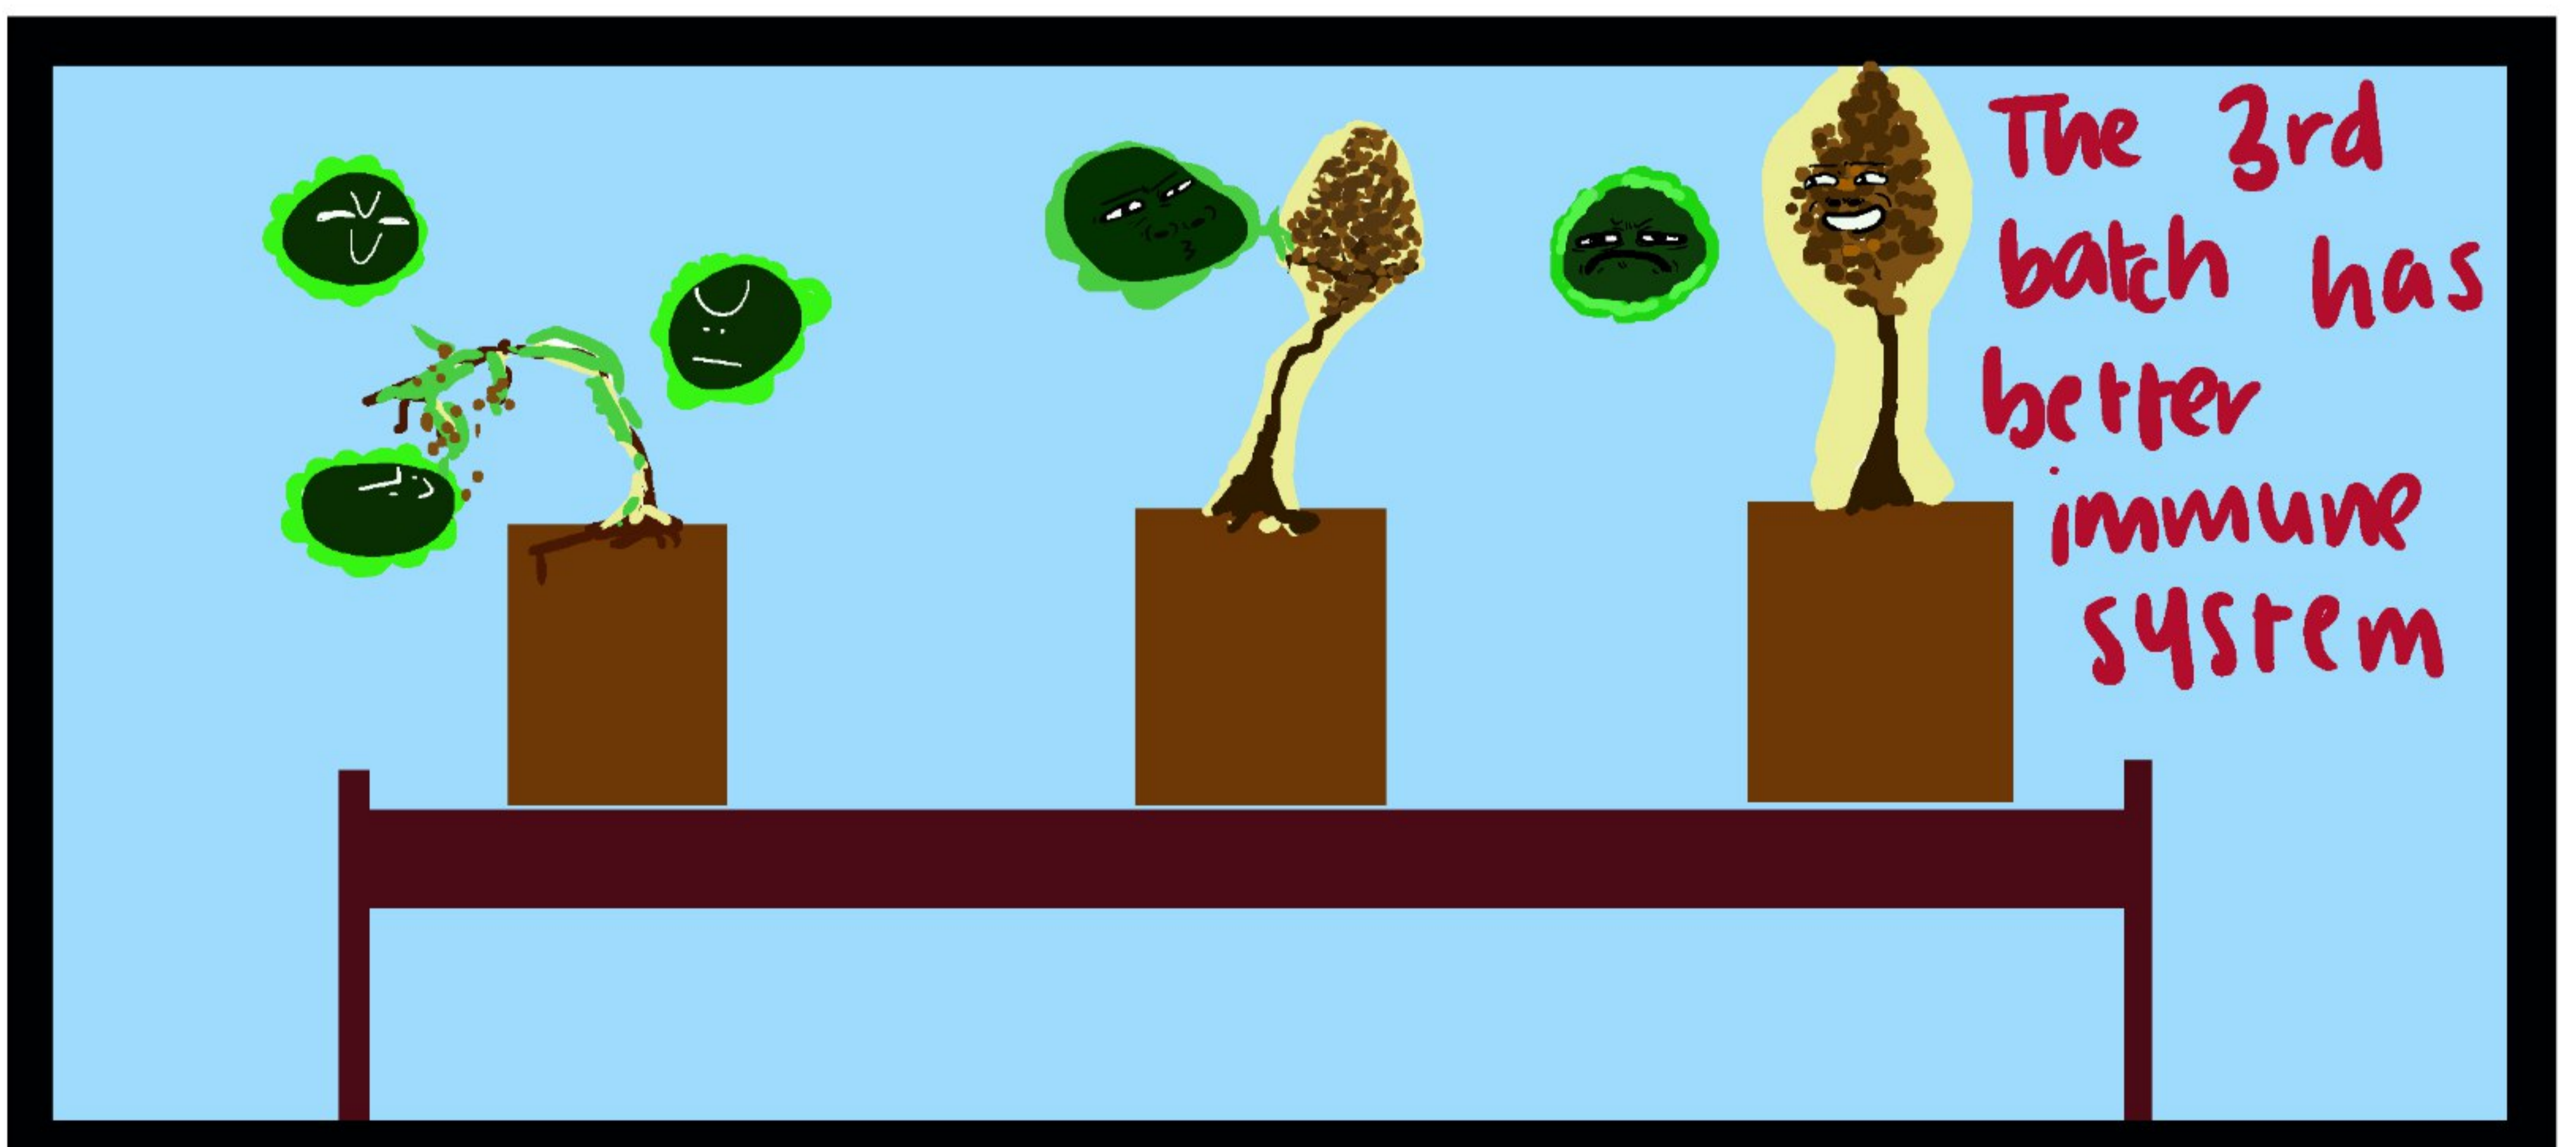

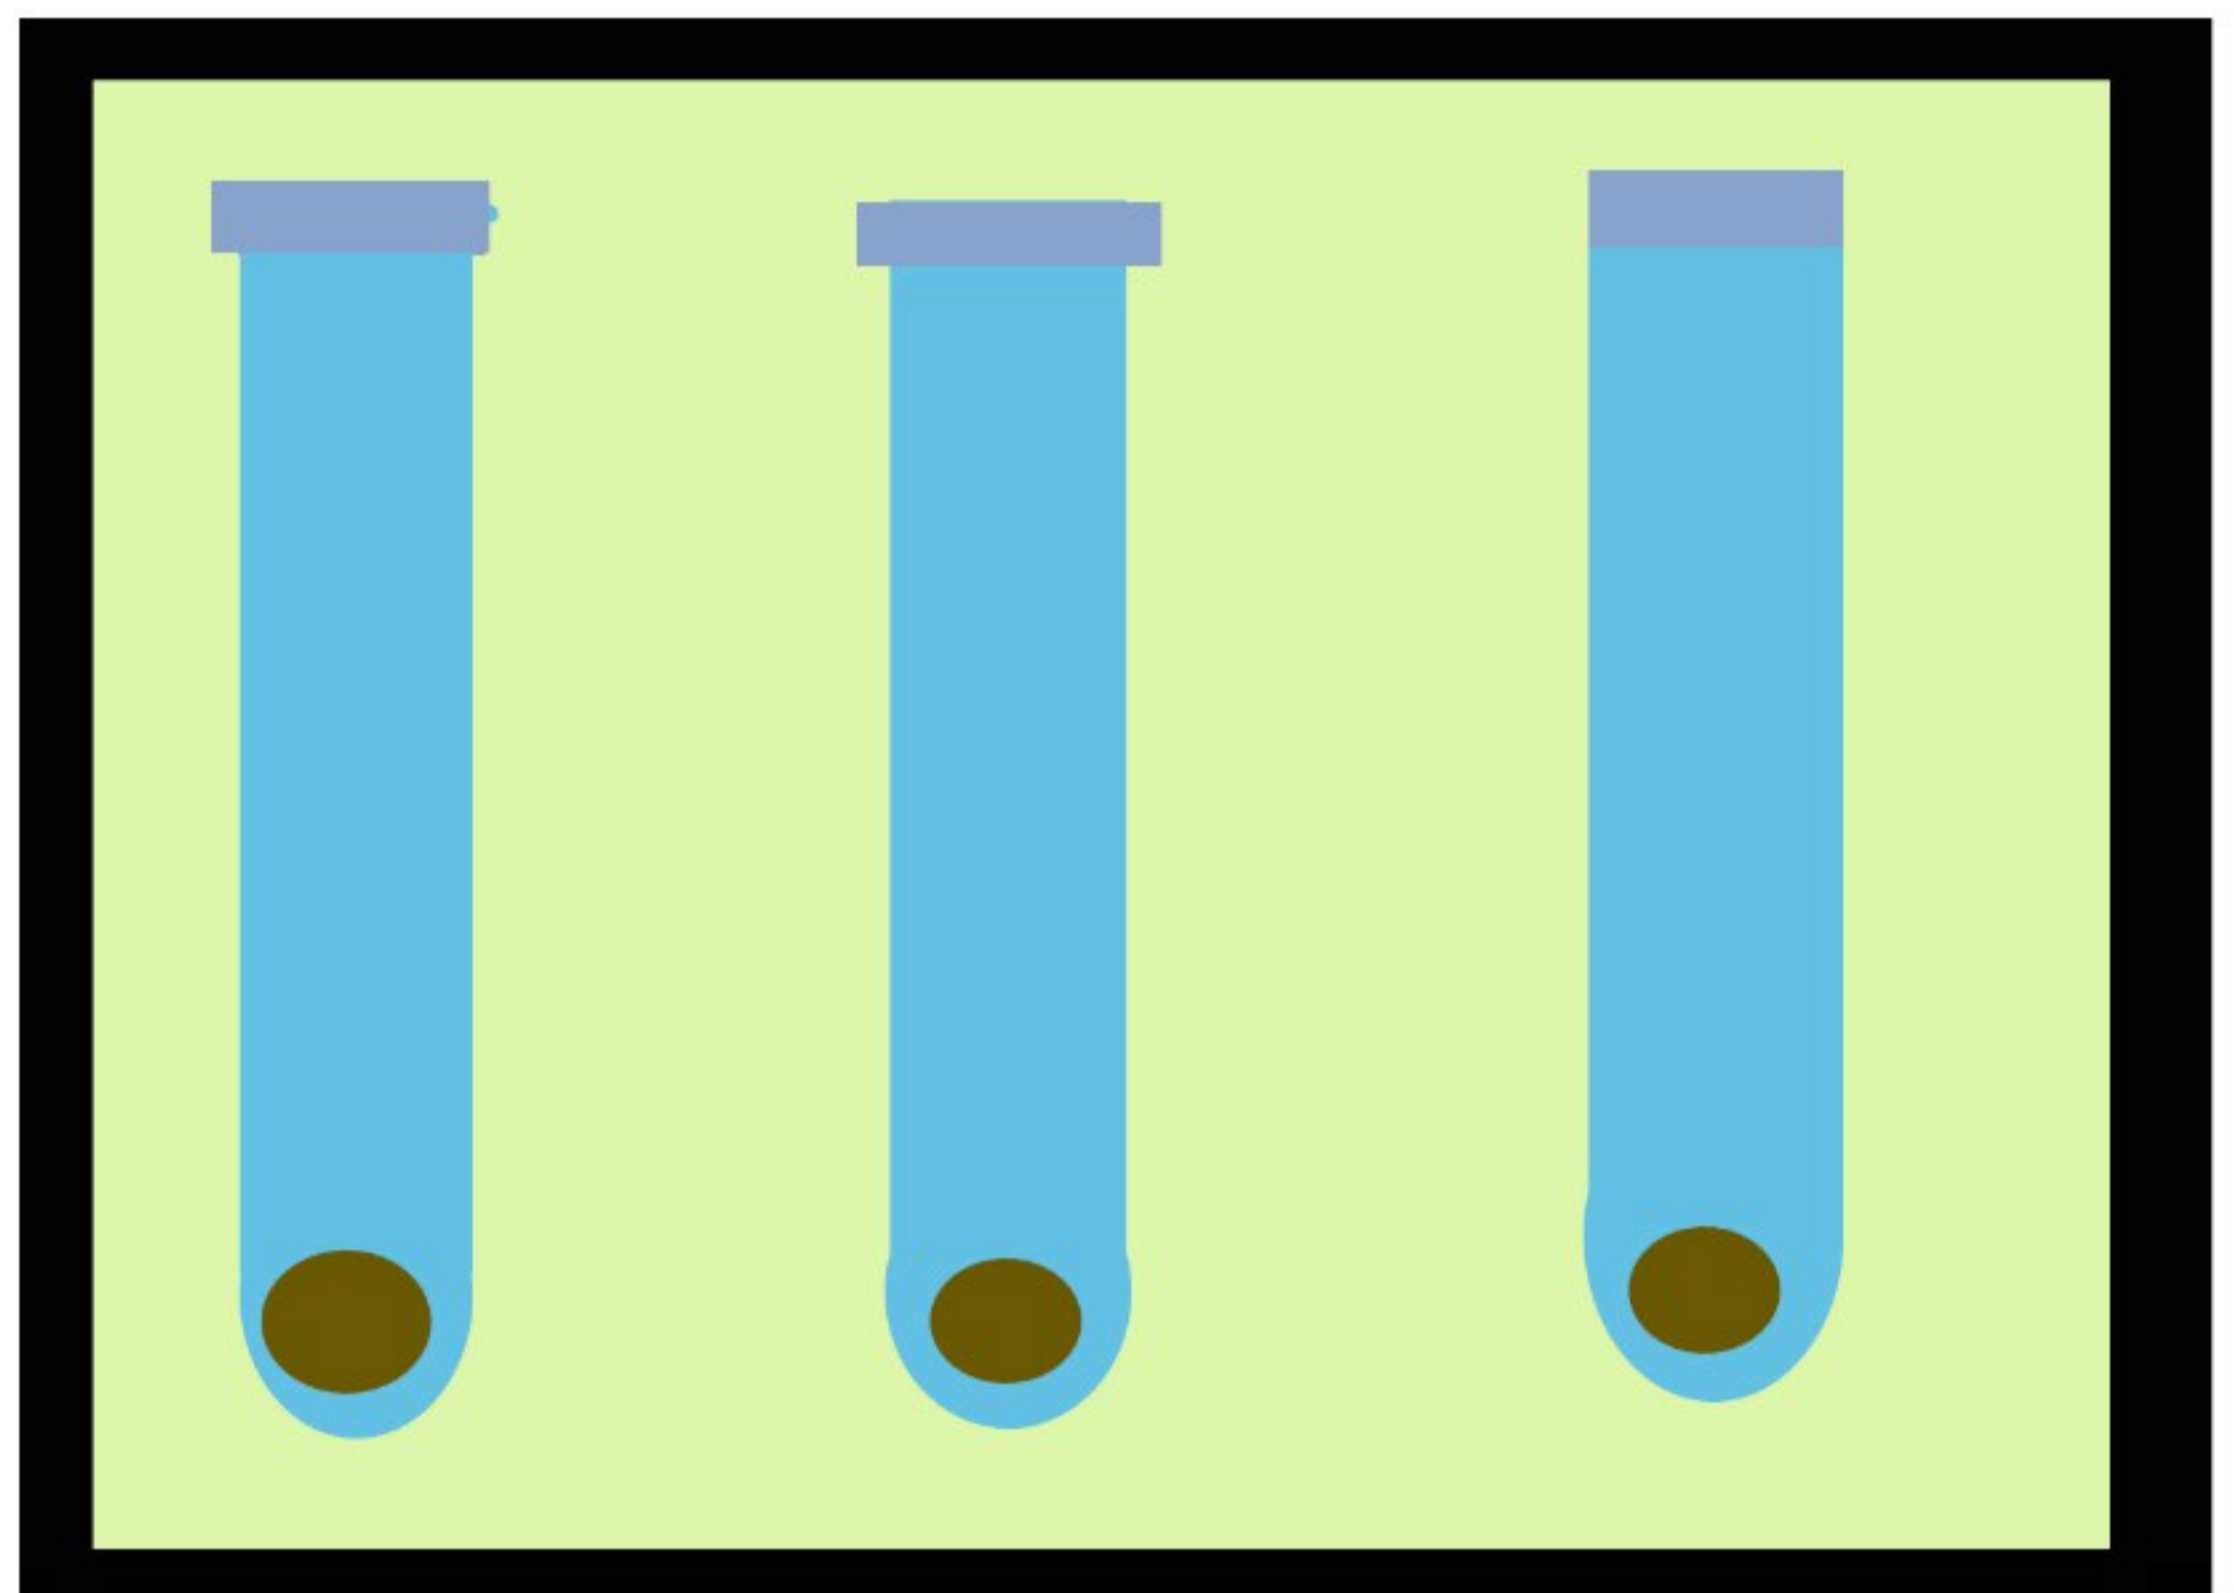

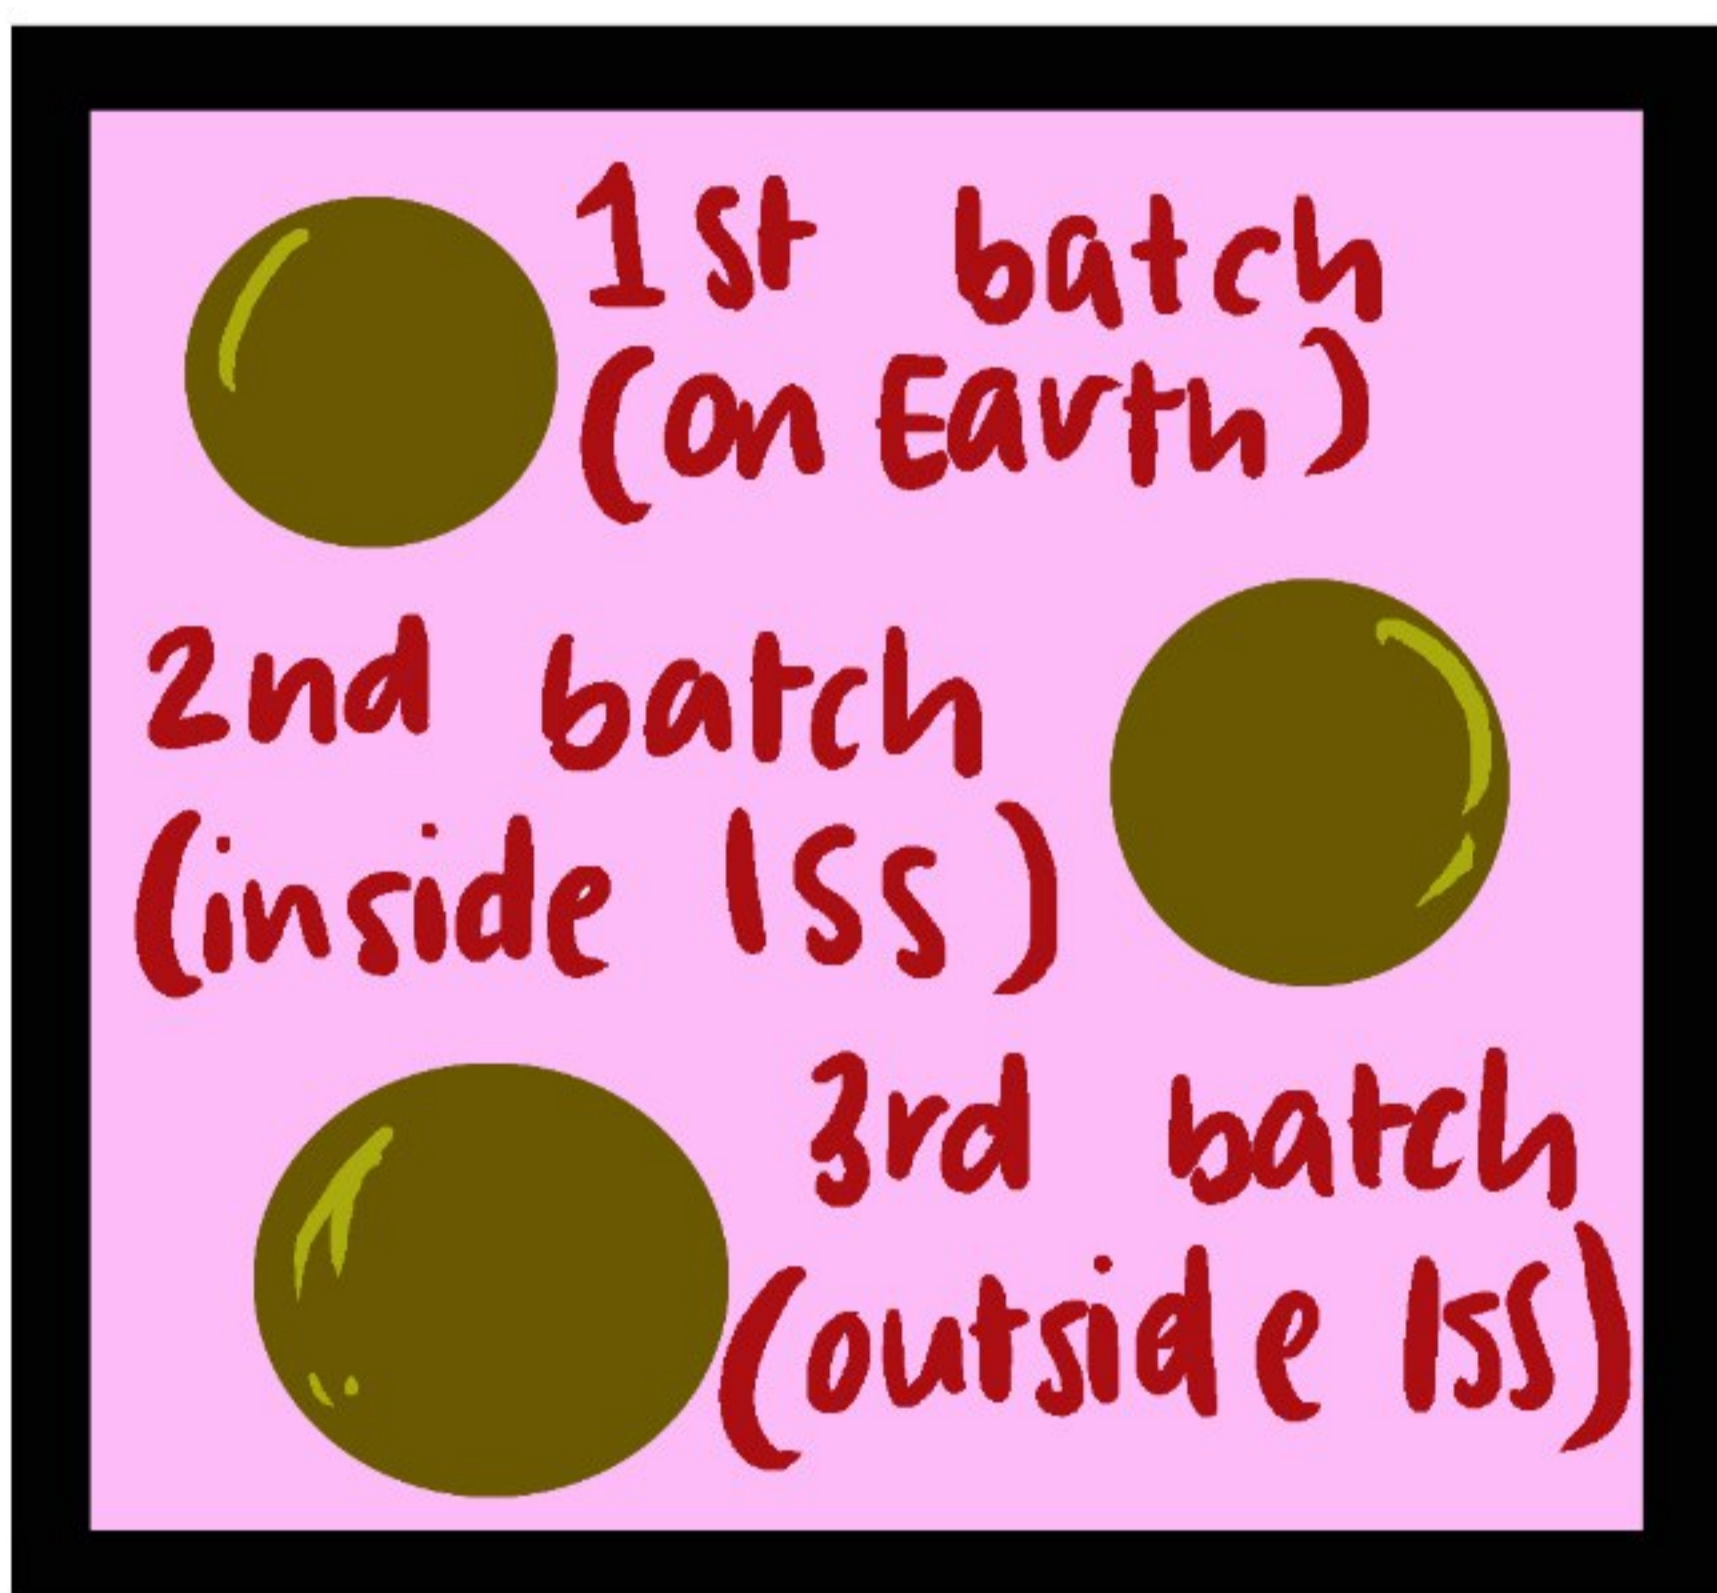

POW

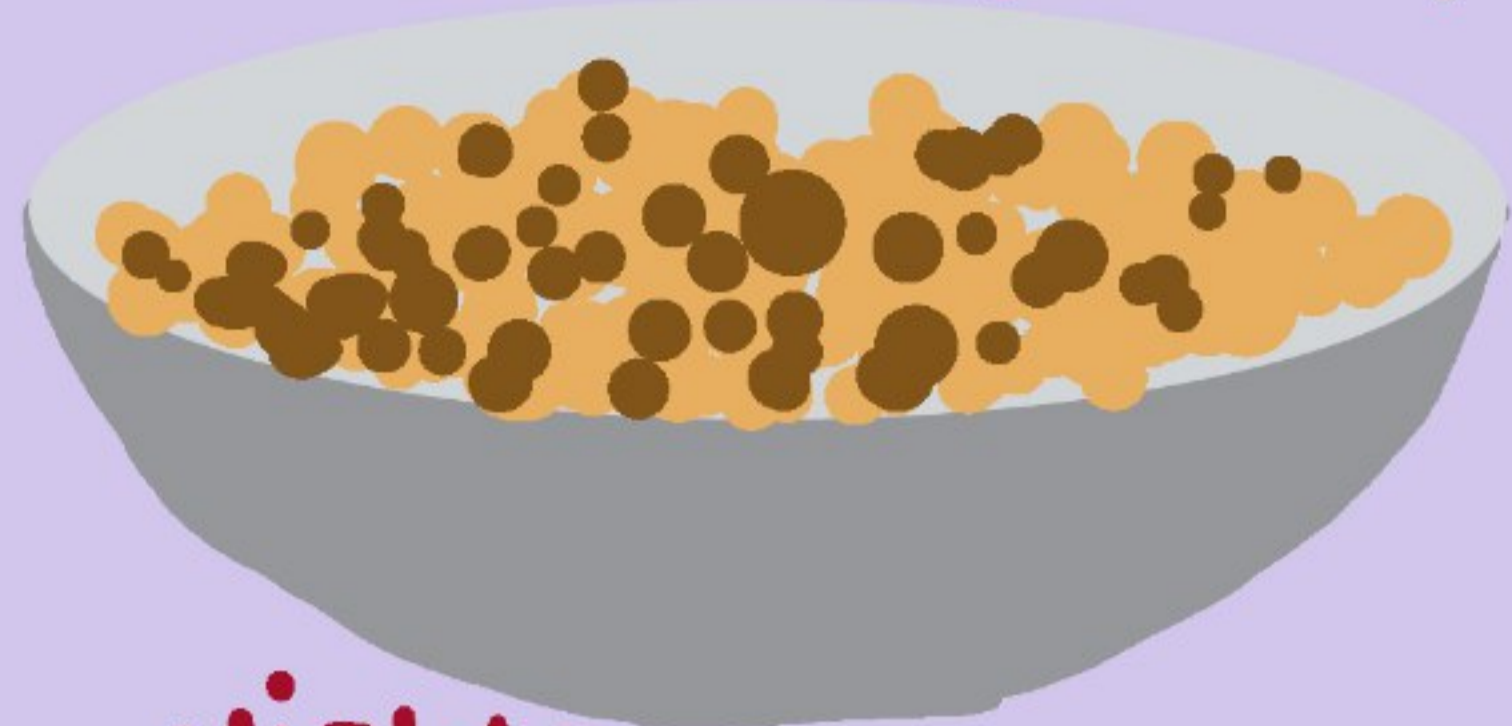

outside...

The seeds return
to Earth

After further analysis,
3rd batch is more
nutricious, resilience to
climate change and

yields more

Now it can be
officially licenced
and released!
to farmers.

and there will
be enough food for everyone
